Touchstone Energy

Ownership has its Privileges

Even though September is just beginning, our focus at the co-op is on October.

Not only is October National Co-op Month when the cooperative form of business is celebrated, October is also when we hold our annual meeting of members.

It's an event we plan throughout the year and one we look forward to each year.

This year we will again meet at the Claremore Community Center. The date is Saturday, October 24.

We will have free hot dogs with all the trimmings, soft drinks, and enjoyable entertainment, along with registration gifts, numerous prize drawings and a great grand prize.

We want it to be a morning of fun, when you have the chance to visit with your neighbors and your co-op trustees, management and employees. But we also want you to recognize the privileges you enjoy as an owner of your cooperative.

There are no issues requiring your vote at this year's annual meeting, but if you live in districts 2, 4 or 6, you will be encouraged to attend your district meeting to select your representative on the our board of trustees.

These are the privileges, benefits and responsibilities of being a co-op owner/ member and are unique to co-ops. Customers of PSO or OG&E don't get to enjoy an annual meeting, or have input on who directs their utility.

So take a little time October 24 to spend a few hours in Claremore at your annual meeting. We always look forward to seeing you.

What to do if Your Power Goes Off

1. Check your fuses or circuit breakers. Every service is different. You may have fuses or circuit breakers in your house, on the side of your house, under your meter, or all three places. Check to see if your neighbors have electricity.

 Call the Co-op at 371-2584, or 1-800-870-5948 if the call is long distance for you. Have your account number, name as it appears on the account, and address handy to give to the dispatcher. If you should get a recording, please don't hang up; leave your information. It will be retrieved and given to the correct department. Every message is answered.

Visit us on the Internet at: www.vvec.com www.vvec.coop

Get the Jump on Drafty Windows

Windows provide our homes with light, warmth, and ventilation. But when winter sets in they can have a downside.

Placing your hand against a window pane on a chilly fall morning proves the point: if the pane feels cold, it's a good bet you can reduce energy costs by either insulating your existing windows or installing new, energy-efficient upgrades.

Insulating with draperies is a lowcost quick fix to drafty windows and can reduce heat loss from a room up to 10 percent. And they're just as help-

<u>September</u>

Calendar

Sept. 19	Skiatook Pioneer Day Festival
Sept. 19	Green Country Bluegrass Show, Catoosa

If you have an event you would like to appear in the calendar, send written information to Power Circuit Editor, P.O. Box 219, Collinsville, OK 74021. Include the date(s), time, location, and a telephone number. Information must be received by the 10th of the month preceding the event.

What makes a window energy efficient? LOW-E GLASS IMPROVED FRAME Special coatings reflect infrared Wood composites, vinyl, and light, keeping heat inside in winter fiberglass frames reduce heat and out in summer. They also transfer and insulate better. reflect damaging ultraviolet light, protecting interior furnishings. GAS FILLS Some windows have argon, krypton, or other gases between the panes. These odorless, colorless, non-toxic gases insulate better than regular air. **MULTIPLE PANES** Two panes of glass, with an air WARM EDGE SPACERS or gas-filled space between, insulate much better than a A spacer keeps a window's glass panes the correct distance apart. single pane. Some include three "Warm edge" spacers made of steel, or more panes for greater foam, fiberglass, or vinyl reduce heat efficiency, impact resistance, flow and prevent condensation. and sound insulation. Source: ENERGY STAR

ful in hot summer months by blocking sunlight. White plastic-backed drapes can reduce heat gain by up to 33 percent.

Interior storm window panels are another low-cost fix (available at most hardware stores), and consist of flexible or rigid plastic installed over or adhered to existing window panes. Installation is fairly simple, and panels are either taped on or mounted with Velcro, magnetic strips, or snap-in seals. Put them up in autumn and remove them in spring to reduce winter heat loss by up to 50 percent.

If you're in the market for new windows altogether, be sure to choose energy-efficient models that will shave heating, cooling, and lighting costs vear round.

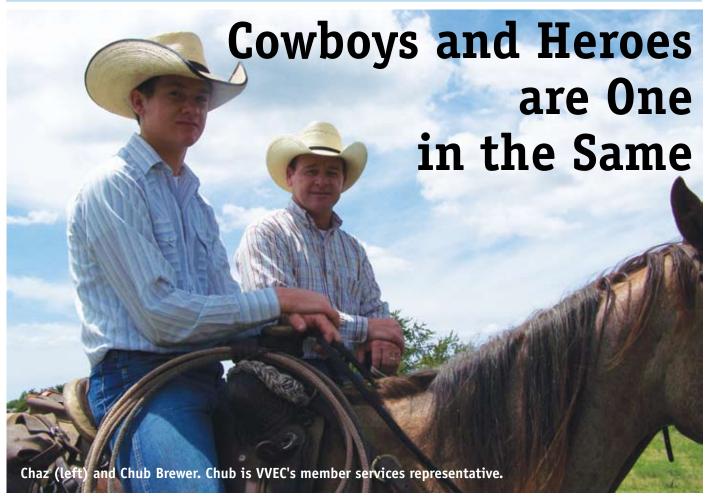

Energy Star[®] has established a set of energy performance ratings, tailored to four climate zones across the United States, to guide you in selecting windows perfect for your home. These performance ratings are broken into several categories, although the two most basic are U-Factor and Solar Heat Gain Coefficient (SHGC), which can be found on window stickers or packaging.

In simple terms, U-Factor measures how easily heat can flow through a window, not counting direct sunlight. The lower the number, the more energy efficient the window.

SHGC measures how much heat from sunlight can be absorbed by the window. A high number means the window remains effective at collecting heat during winter. A low number provides greater shading ability and may be best for Southern climates.

Here in VVEC's service territory, windows for the South/Central climate zone are best. Look for a U-Factor of .40 to .43 and a SHGC of .40 to .24. To determine your climate zone and corresponding U-Factor and SHGC numbers, visit: http://www.energystar.gov/index.cfm?c=windows_doors. pr_crit_windows

You can also visit www.energystar. gov for more details on our climate zone and other criteria to consider when shopping for new windows.

by Kay Rabbitt-Brower Power Circuit Editor

Sarah Thomas' heroes may not always have been cowboys, but they are now.

That is after 16-year-old Chaz Brewer and his dad Chub found Thomas' missing 2-year-old daughter Sakari.

Chub is VVEC's member services representative.

Thomas, her husband Fabian, Sakari and their two sons, were camping near Hawthorn Bluff on Oologah Lake when Sakari wandered off in the wee hours of Monday, August 3.

Chub says no one is clear on where the little girl thought she was going when she unzipped the tent where she was sleeping with her mother, and wandered away. Or exactly when she vanished. But when her father returned from fishing with one of his sons about 3 a.m., he discovered her missing.

After a brief, but frantic, search, Rogers County authorities were notified and a formal search began. In the next few hours, members of area police and fire departments would join the search, along with representatives from the Army Corp of Engineers, divers, the Oklahoma Highway Patrol's canine unit and helicopters, and numerous volunteers. Within a few hours, about 100 people were searching for Sakari on the ground, in the water and from the air.

Chub learned of the missing toddler from a news report on the television in VVEC's employee break room Monday morning.

"I stopped to watch the report and my heart just broke for that family," he says. "I have a 3-year-old grandson and I know if he was missing I would want anyone who could, to help us look for him."

So Chub told his fellow member services department members he was leaving work to join the search.

"Then I called Chaz and told him to saddle the horses."

Sakari had now been missing between seven and eight hours.

Naturally, authorities started the search near the family's campsite.

"People were looking in the wooded area around where they'd been camping, and since that area is bordered on three sides by the lake, divers were preparing to look in the water," Chub says. They were searching on foot, using dogs, mules, and All Terrain Vehicles. When no one found any sign of her, authorities began expanding the search area.

"I got to wondering if anyone had looked over by the PSO plant," he says.

"You know, during the day with all the traffic on the highway and everything, you don't hear the noise that plant makes. But at night...it's all lit up and can make a lot of noise. I just got to wondering if maybe that didn't catch her eye," he explains.

"Her mom said they were 'city folks,'" adds Chub's wife Christy talking about

HEROES

the Thomas' who live in Tulsa, "and that they weren't used to being out in an open rural area."

Chaz and Chub hauled their Quarter Horses, Copenhagen and Pedro, out to some land they lease near the PSO plant, and began searching.

As the sun rose higher in the sky, the temperature was heading toward 100 degrees. Searchers were getting hot and tired and knew little Sakari must be feeling the same way too.

"We just worked our way across the pasture," says Chub, "and would stop every so often to listen for her or to see if there was any sign of her.

"We thought being on horseback, we were high enough to see a little better, but close enough and quiet enough to hear her too."

They had been searching for about 90 minutes, walking along calling her name, when Chaz heard her say "Daddy."

"We were in grass that was about four feet tall, so I couldn't see her," Chaz explains. "I called her name again, and heard her say 'Daddy.' I had to get down and walk toward where I'd heard her to find her.

"She seemed to be ok, and when I put out my arms to pick her up, she put out her arms like she wanted me to hold her," he says.

Chaz yelled to his dad, saying "I found her!"

Chub rushed to where Chaz and Copenhagen stood with little Sakari. He agrees she looked ok, but had taken off her Pull-Up diaper and was naked.

"I gave her my shirt and we gave her a drink of water. You could tell she'd been out in the weeds and grass, because she had some scratches on her, but nothing that looked serious. She looked like she might have been asleep too. I squatted down and sat her on my thigh and she asked about her daddy again. I told her he was on his way."

Chub notified the authorities they'd found her, and were told an ambulance was being dispatched to their location.

Once authorities verified she was the little girl they were searching for, medi-

cal personnel checked to see if she had any injuries. "They agreed she looked ok, but of course, they took her on to the hospital to be checked out," Chub says.

Authorities radioed the command post to let everyone know the little girl had been found – alive – and seemed to be ok. It was just after 11:30 a.m. and little Sakari had been missing between eight and a half and nine and a half hours.

"Her parents were so relieved," says Christy. "They were afraid they were going to get bad news. Some of their family from out of state were on their way here so they could be with them if the news was bad."

Chaz and Chub agree her parents could have easily gotten bad news.

"She could have fallen in the lake, or gotten hit crossing the highway (State Highway 88), or fallen into some ponds near the PSO plant, or even fallen off a 20-foot drop by the plant," says Chub. "The helicopters flew over us probably four times and they couldn't see her because the grass was so tall. It's just a miracle she was found and that she was alright."

Because of media attention focused on the search, both Brewers became instant celebrities; something that doesn't sit easily with either one of them.

"It was a little embarrassing when

I went to sign up for the (Bartlesville Round-Up Club Green Country) rodeo a few days later," says Chaz. "One of the ladies asked me if I was the one who found the little girl."

"When he got ready to compete, the announcer told everyone 'this is the young man who found the little girl who was lost,' and had everyone give him a big hand," Christy says.

"Yeah, it was kinda embarrassing," Chaz says quietly.

"I don't think any of us who know Chub found it out of the ordinary that his first thought was 'How can I help?" says VVEC General Manager Alice Houston. "He's a generous individual and someone who genuinely cares about people – those he knows and those he doesn't know. He and Christy have raised their family to be that way, too."

Houston goes on to say "Although we may view them as heroes, I don't think they feel that way.

"After the little girl was found, Chub and Chaz went home, put up the horses, cleaned up and Chub came back to work. They had succeeded in doing what they set out to do and they returned to their daily responsibilities."

When asked what made them choose to search in an area away from the formal search, Chub grins and pauses as if to gauge the weight of his response.

"I guess I just had a feeling. Something just told me to look over here."

Map by Oologah Lake Corps Office and Oologah Lake Leader

Benefit of Co-op Ownership

Trustees Vote to Return \$500,000 in Capital Credits

They say seven is a lucky number. If so, VVEC members are certainly lucky. For the seventh consecutive year, your board of trustees has approved returning \$500,000 in capital credits. The amount will appear as a credit on your October electric bill.

Capital credits are one of the benefits of cooperative ownership and are unique to the cooperative form of business. According to the co-op's auditing firm – Briscoe, Burke & Grigsby – one dollar in five of the co-op's equity has been returned to the members in the form of capital credit retirements.

Clyde Willard, VVEC director of finance, says about 65 percent of that amount, or about \$325,000, will be paid to members who were receiving electricity from the co-op in 2008. The remaining 35 percent, or about \$175,000, is being returned to members who were receiving power in 1980. Refund amounts are based on the usage of each member during 1980 and 2008.

As in the past, the credit will be identified as a 'patronage refund' and will be subtracted from the total amount due on your October bill.

Willard says members with multiple accounts will receive one credit on their membership account. That one credit will reflect the total accumulated capital credit refund from all of their accounts.

Willard says this is the sixteenth consecutive year capital credits have been returned, adding \$12,093,488 has been returned since VVEC was founded.

Former VVEC members will be sent a check for their refund if it is \$5 or more. Lesser amounts will be held in each individual's capital credit account until it reaches the \$5 minimum.

If you have questions about your capital credit refund, please call one of our consumer representatives at 371-2584 or 1-800-870-5948 between 7:30 a.m. and 4 p.m. Monday through Friday.

NEWS

Members Owed Capital Credits Listed on Co-op Web Site

A list of members who have not collected their Capital Credits can now be found on our Web site – www.vvec.com.

Frequently, members don't give us a

forwarding address when they move off of co-op lines, so we don't know where to send their Capital Credit checks.

If you know a former member, please

encourage him or her to visit the Web site to see if their name is on the list. Or call us if you have information on how to reach someone on the list.

From a Friend's Kitchen Healthy and Fun Snack

No matter what advances are made in our schools, nothing has changed about kids still coming home at the end of the day hungry for a snack.

The challenge for parents is to have snacks on hand that are healthy.

This month's recipe is a delicious way to get your students to eat fruit, plus it can be made ahead of time. You can even include the kids when making it.

These are also good to take to class parties, or as your contribution to such things as Boy or Girl Scout functions, Halloween parties, or church youth group gatherings.

There are a few tips I want to share to help make this an enjoyable, useful recipe for you, though.

Spritz the apples with lemon juice before placing them in the refrigerator.

Melting the chips or almond bark in a double-boiler instead of the microwave seems to make it adhere better to the apples.

And make sure the apples are dry before dipping them.

Kay Rabbitt-Brower

Mini Caramel Apples

4-inch lollipop sticks
Melon baller
Granny Smith apples or apples of your choice (one apple makes about 8 mini apples)
Butterscotch or peanut butter chips, or almond bark
Chopped nuts, nonpareils, sprinkles, shredded coconut (optional)
Small paper candy cups

First, cut the lollipop sticks in half at an angle (the pointy end will go into the apple pieces easier.) With the melon baller, scoop little balls out of the apple. Each ball should have a section of apple peel. Push half of a lollipop stick into the peel of each ball.

Pat the apple pieces dry.

Melt the chips according to the package directions. (Using a doubleboiler works best.) Dip and swirl the mini apples in the melted chips, then roll the apples in nuts, sprinkles, nonpareils, or coconut, if desired. Place the mini apples in paper candy cups to set.

CLASSIFIEDS

Everything Goes

Maytag Ig. capacity automatic washer, \$225; Maytag Ig. capacity electric dryer, \$125, 272-3900.

Chickering piano w/stool, \$100 OBO; brown leather sofa & love seat, \$300 OBO, 273-2338.

VVEC's Power Supplier is a Partner in Missouri's Largest Wind Farm

Winds blowing across Missouri will benefit Oklahoma electric co-ops when the Lost Creek Wind Farm is completed.

Construction on the wind farm, located in DeKalb County about 70 miles north of Kansas City, began in July – one month ahead of schedule. Wind Capital Group is developing the wind farm and completion is scheduled for spring 2010.

It will be Missouri's largest wind facility at 150-megaWatts, which is almost as much as Missouri's three current wind farms produce combined. "The 157 megaWatts currently produced by those wind farms can power 45,000 homes," explains VVEC's General Manager Alice Houston.

VVEC's wholesale power supplier Associated Electric Cooperative (AECI) will purchase all of the electricity generated by the wind farm's 100 massive turbines. That power will enter the electric grid at one of AECI's substations.

AECI is owned by and provides wholesale power to six regional and 51 local electric cooperative systems in Missouri, southeast Iowa and northeast Oklahoma that serve more than 875,000 customers. It is a Touchstone Energy Cooperative.

"This is the fourth Missouri wind farm developed through a partnership between AECI and Wind Capital Group that harvests the wind energy in Associated's service area and invests in our rural communities," says VVEC Trustee Carl Long who is currently president of the board of trustees for KAMO Power. KAMO is one of the six regional generation and transmission cooperatives that owns AECI. Along with generating electricity, it also buys electric power from AECI and sells it to VVEC and other distribution co-ops in northeast Oklahoma.

"This will help VVEC meet our members' need for reliable, low-cost electricity in the future," he adds.

He goes on to say the Wind Capital Group estimates Lost Creek will create 2,500 new jobs in manufacturing, construction, and maintenance, including positions at GE Energy which will assemble the wind turbines.

Interesting wind turbine facts:

Each turbine stands more than 260 feet high and has three blades.

▲ Each blade is almost 140 feet long and weighs more than 14,770 pounds.

▲ The rotor diameter is 289 feet.

▲ Foundation for each tower is 15 feet in diameter and 34 feet deep.

▲ Each turbine generates at 600 Watts and has a rated output of 2,100 Watts.

REMINDER

No Classifieds Ads will be included in the October issue of Power Circuit because it is our annual report issue.

Plans Underway for October Annual Meeting

Plans are already underway for our 71st annual meeting, Saturday, October 24.

On that morning, VVEC members will enjoy the privilege of membership by visiting with trustees and fellow members, along with hearing some great entertainment and being eligible to win any number of wonderful gifts.

The meeting will be held at the Claremore Community Center, located east of Route 66 at 2301 N. Sioux.

Registration begins at 9 a.m. and continues until 11 a.m.

The registration gifts this year are a dozen new energy efficient CFL light bulbs, and VVEC caps. The light bulbs are each 20-Watt bulbs, which is equal to 75-Watt traditional bulbs. These are 'instant on' bulbs with a minimum life of 8,000 hours.

Coffee and donuts will be available at 9 a.m.

Popular local Country and Western entertainer Paul Bogart will again keep toes tappin' with his talented singing and fiddle playing. He and his band take the stage at 9 a.m. and continue until 10:45.

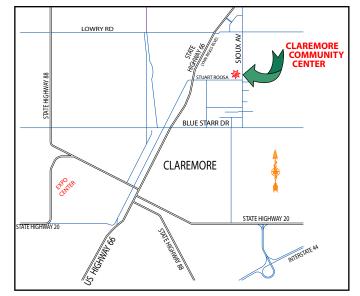

A free light lunch of hot dogs with all the trimmings, chips and cool soft drinks will be served from 10:30 until noon. At 11 a.m. we'll begin the meeting.

Following the meeting's conclusion, we'll conduct the popular prize drawings.

We will give away a large number of great gifts such as electric appliances and power tools. Three members in each of the co-op's nine districts will win a \$50 credit to their electric bills. And

one lucky member will win the grand prize – a \$500 electric bill credit.

Mark your calendars now for Saturday, October 24 and plan to join us for your annual meeting.

The Claremore Community Center can be found by taking Hwy. 66 to Blue Starr Drive and then heading east. Turn north (left) onto Sioux and the Community Center is located on the left.
